Thoughts/Questions

- Overall - do we agree with the Use Case diagrams?

- Use case 1 - need layer for search (Yann Th/Fri)

- Using search - didn't get direct hits

- Need search which removes stop words etc.

- What are we missing here?

- PDF example good case in hand.

Thoughts/Questions

- Use case 2 - implementation is in place

  - Need buy in from resources and/or submitters

  - Check databases if they see overlap with their materials

  - What are the priorities?

    - TESS?
